Usability Testing Results

- Right click context menu isn't immediately intuitive
- Hitting Enter to save a note isn't intuitive (should be able to click out of it)
- "Track Spending" button label isn't intuitive for charts
- The chart selector is hard to notice
- Not clear that the Ignore Editor is in the import menu
- Right-click add transaction sucks
- ¾ users used the right click add transaction option over the button and fancy UI
- First instinct to undo actions was to go to the right click context menu
- "Payee Editor" is a confusing name
- The importing process isn't very intuitive
- Collapsible tabs not intuitive
- Column hide isn't intuitive
- Right clicking seems to select rows
- Delete key works occasionally
- Closing the ignore transactions window was unclear
- Row keeps focus after editing transaction
- Export works occasionally
- "Ignored Editor" was confusing
- Thought the table headers were settings/filters
- Tags should autofocus so you don't have to click to type
- Ignore Editor needs a done button – not clear how to leave it as is
- Some try to rename folder on export, sometimes throws an error
- Ctrl-z is hidden/unclear
- Existing DB file chooser defaults to home directory
- Unclear that left side account selection restricts transaction table
- Filter needs to update on the fly, not just on enter or clear
- Export select folder vs. file is unclear/unintuitive
- Tried to double click DB to open (unsure how to open DB in the first place)
